EXPERIENCE

Apple Developer Academy

Mar. 2026 – Present

Junior Developer

Bali, Indonesia

- Build native iOS that has to run on-device — no cloud for inference — and ship via TestFlight
- Published a Swift package with a public API and tests; used it from a production AR app

PROJECTS

RealityAudio | Swift Package Manager, Swift 6, RealityKit, AVFoundation | [GitHub](#)

- SDK-shaped library: Package.swift (Swift 6), public RealityAudio.play(_:in:at:occluded:), links RealityKit + AVFoundation
- Swift Testing target for spatial math; iOS 17+ / visionOS 1+; extracted from Revenants so hosts import it instead of forking game code

Coralyst | Core ML, Python, AVFoundation | [GitHub](#) Prototype

- On-device inference: bundled BlastEventClassifier.mlpackage via MLModel; Sendable classifier; AVAudioEngine in, local prediction out
- Trained a 2-layer bidirectional LSTM on ReefSet (57k clips); ROC-AUC ~0.95–0.98; no live network at detection time

Sema | llama.cpp, Gemma 4, MediaPipe, Swift | [Writeup](#)

- Offline KSL ↔ English/Swahili on iPhone — Gemma 4 (E2B) through llama.cpp, camera via MediaPipe, no server-side model

Revenants | Swift 6 concurrency | [GitHub](#)

- @MainActor services, Task { @MainActor } hops from Network.framework, drop frames when pendingSends > 6

ACHIEVEMENTS

RealityAudio featured by **DevBytes** **1st** — Cursor Bali Hackathon **Finalist** — Geo AI Hackathon, IIT Bombay
AIR 3 — AlgoUtsav 2025 **Kaggle** — Dataset Expert & Notebook Expert

EDUCATION

BITS Pilani

Expected 2028

Bachelor of Science in Computer Science

CGPA: 8.54/10 · 3rd year

SKILLS

On-device : Core ML, MLModel, llama.cpp, Foundation Models, MediaPipe

SDK / iOS : Swift, SPM, Swift 6 / Sendable / actors, AVFoundation, RealityKit, public API design, Swift Testing

Also : Python (training), Git, Xcode
