EXPERIENCE

Apple Developer Academy

Junior Developer

Bali, Indonesia

- Ship production-shaped iOS: Swift 6 isolation, REST clients, Keychain, unit-test targets, TestFlight
- Work across client and a Spring Boot API when the product needs a real backend (Who's Out)

PROJECTS

Revenants | Swift 6, Network.framework, VIPER | [GitHub](#) [TestFlight](#)

- Swift 6 concurrency as the architecture: @MainActor services, hops from Network.framework callbacks, bounded send queue
- Custom wire protocol over Bonjour; views never talk to ARKit or the network; TestFlight

Who's Out | URLSession, Spring Boot, CryptoKit | [GitHub](#) [TestFlight](#)

- REST actor APIClient: Bearer auth, refresh, retries; E2E CryptoKit so the API stores ciphertext; tokens in Keychain
- Unit-test target KismetTests; Siri / App Intents; WidgetKit

RealityAudio | SPM, Swift Testing | [GitHub](#)

- Published package with a public API and a Swift Testing suite — the kind of library a product team can import

Rush Hour | MVVM, SwiftUI | [GitHub](#)

- @MainActor view models, AVFoundation capture, WidgetKit — screens that stay responsive under camera load
